

COURSE API LAB SUBMISSION

Frontend • Backend • API Testing

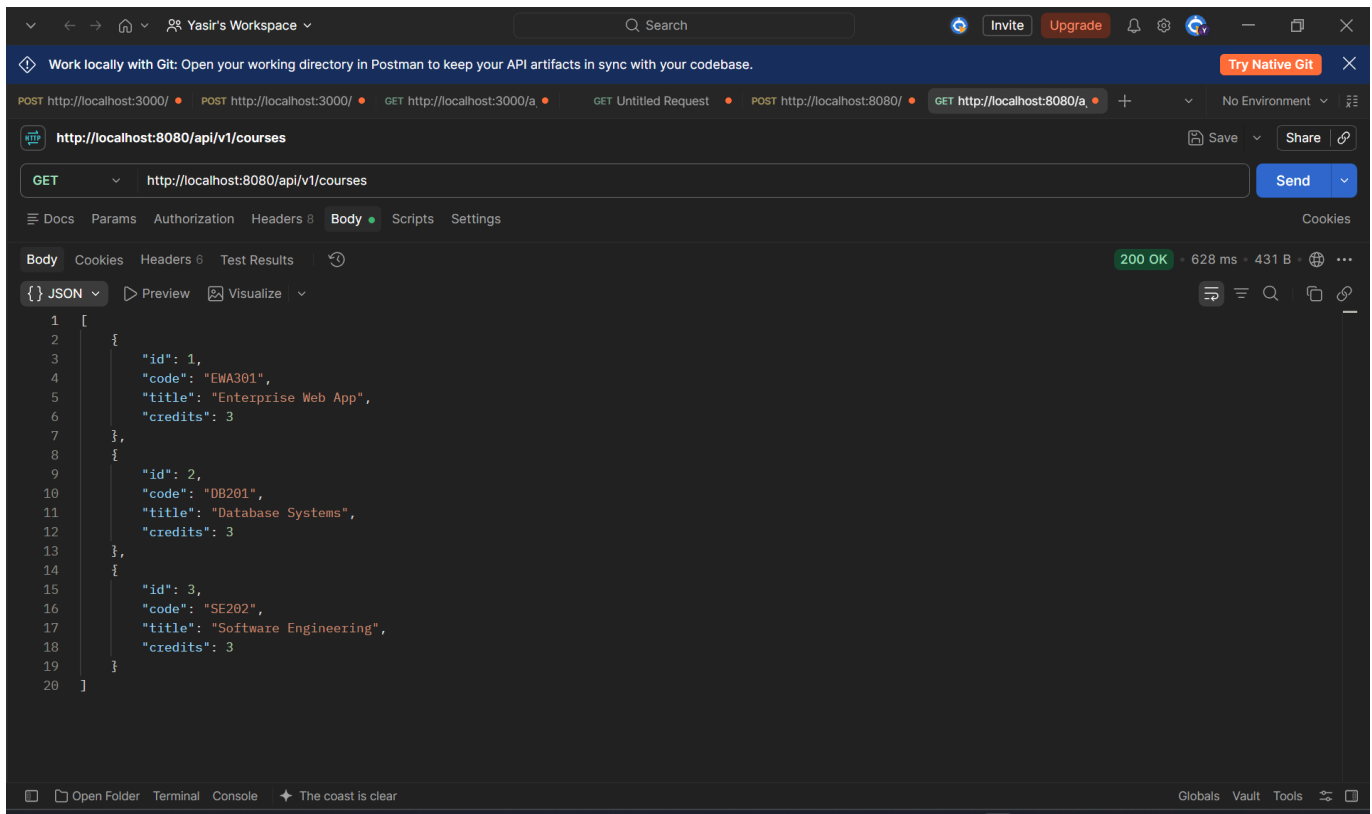

Yasir Yusufi | 7th Semester
lab 5

01 REPOSITORY LINKS

Frontend Repository	https://github.com/yasiryusufi7/Compushub-React.git
Backend Repository	https://github.com/yasiryusufi7/Enterprise-web-app-labs.git

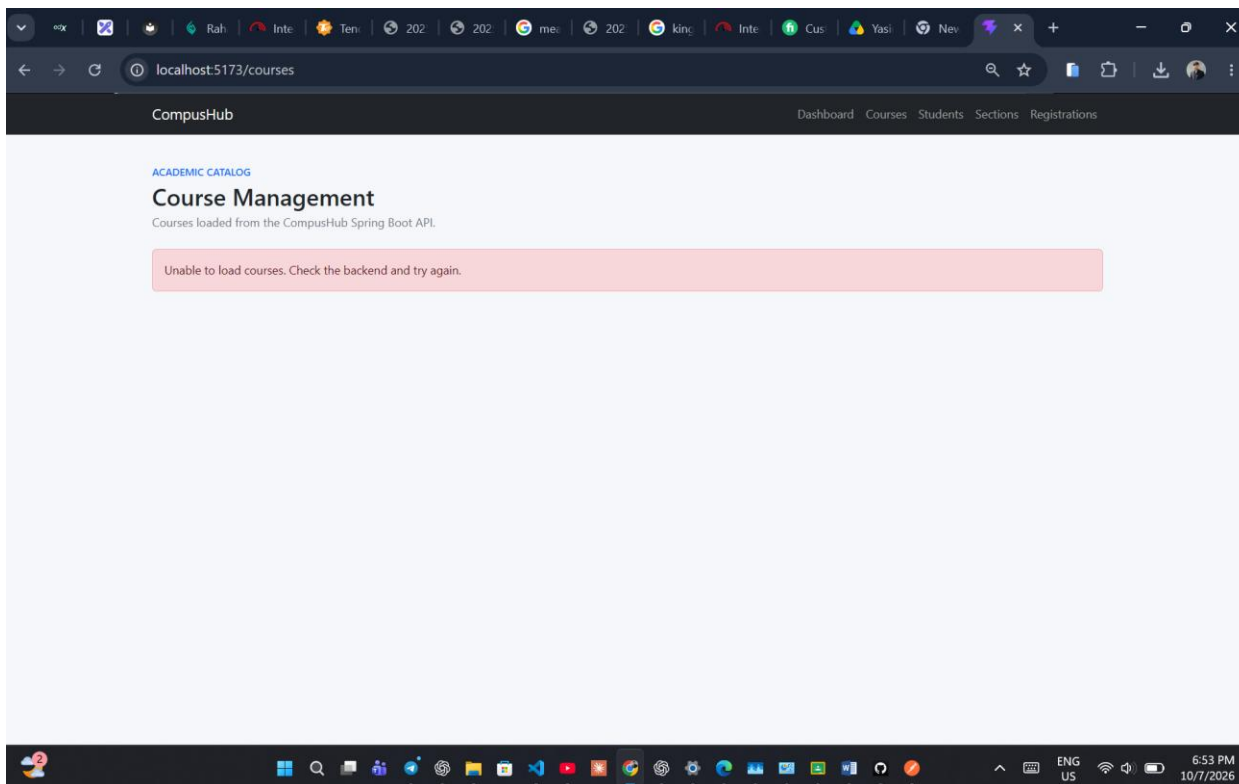

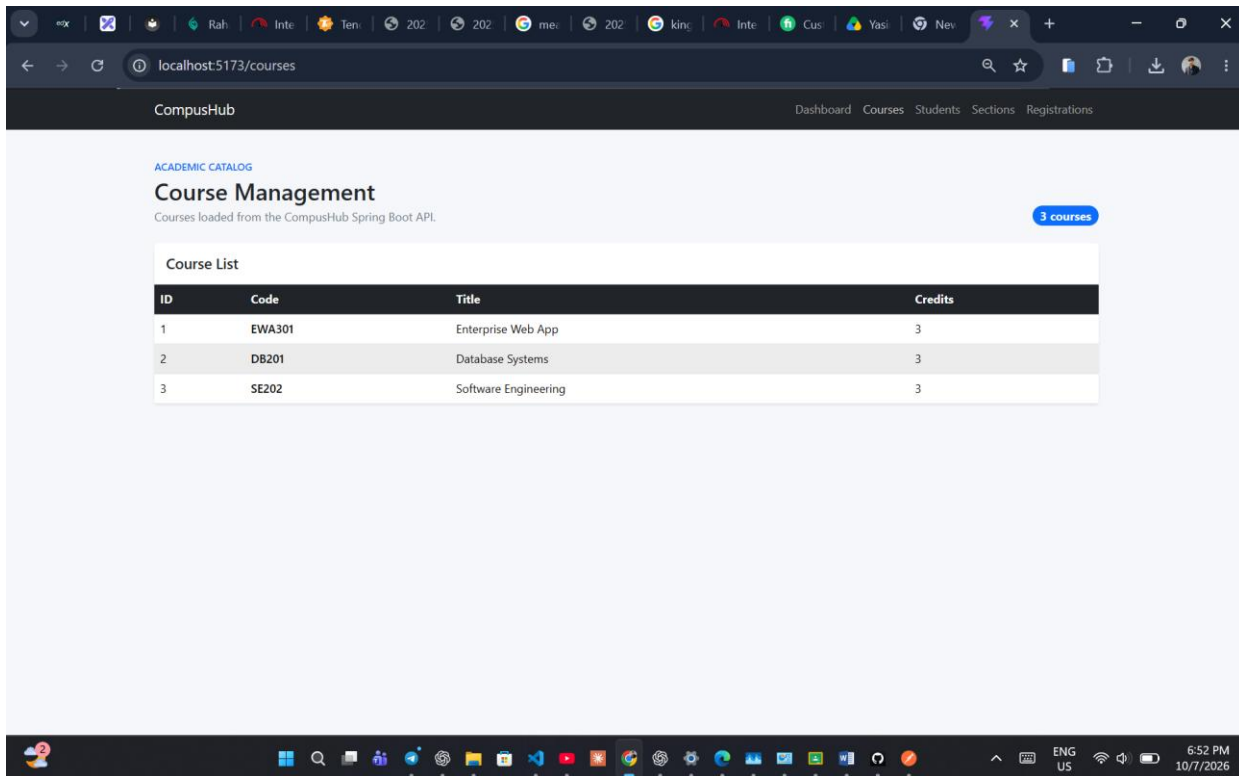

02 API EVIDENCE

successful GET request and response from Postman.

03 FRONTEND EVIDENCE

screenshots showing the populated course table and the visible error state.

04 BRIEF ANSWERS

Why use `useEffect` here?

`useEffect` runs the API-fetching code after the component renders, so the frontend can load the course data when the page opens.

What does `setCourses` do?

`setCourses` updates the `courses` state with the data returned by the API. React then re-renders the course table using the new data.

Why can Postman work while a browser request fails?

A common reason is CORS. Browsers enforce CORS rules for cross-origin requests, while Postman is not restricted by the browser's CORS policy.
